Sims 4 Slow Download Mac

Hi there, I bought sims 4 last week and its running soooo slow! I use to play sims 3 on the same laptop and it never ran this slow! The game has randomly shut down as well, and the mouse is liked delayed by a couple seconds, once i click takes aggges for any reaction, I have changed all my graphic settings and currently have it on low settings, will work fast for about 5 mins then goes back.
